

THE INNOVATORS OF COMFORT™

HAPPY BACK, HAPPY LIFE

From work to evenings at home, many of us spend hours each day sitting. But did you know that not sitting properly can be damaging to your health? Ekornes is committed to creating quality seating to support the back, neck and spine so you can stay healthy and rest comfortably.

AVAILABLE IN 3 UNIQUE SIZES

The average furniture is designed for a male who is 5 feet 10 inches tall and weighs 165 pounds. Only 2 percent of the population has this build. To protect the back, look for seating that fits your posture – where your feet rest comfortably on the floor with your knees higher than your hips. Now all Stressless Signature and Classic Base recliners are available in small, medium and large so consumers can find the best fit possible.

EQUIPPED WITH COMFORT TECHNOLOGY

Each person's spine is unique, so it is important for seating to adapt to the individual's needs. Stressless recognizes this need. For example, its patented Plus™ system cradles the back, neck and head for optimal support upright and reclined. The Comfort-Zones™ technology allows you to sink deep into a chair instead of sitting on top of it and the new Balance-Adapt™ system gives select Stressless recliners and sofas a slight back-and-forth motion to simulate rocking.

SIT COMFORTABLY AT WORK

Whether in the living room or at the office, furniture needs to be friendly to the human frame. Stressless offers home office seating so you can enjoy added comfort while you work. Equipped with the same comfort technologies as Stressless recliners, Stressless home office seating offers the support you need for hours at a desk.
